EDUCATION

University of California, Los Angeles (UCLA)

Los Angeles, CA

B.S. Statistics and Data Science, Global Health Minor

Expected June 2027

- **GPA:** 3.8, Dean's Honors List
- **Relevant Coursework:** Data Analysis & Regression, Mathematical Statistics, Linear Models, Data Structures & Algorithms

SKILLS

Programming Languages: Python (Pandas, Keras, Scikit-learn, Streamlit, TensorFlow, PyTorch), C++, R, SQL, Java

Tools & Platforms: Jupyter Notebooks, Tableau, Excel, NLP libraries, Transformers (Hugging Face), Snowflake, AWS, Spark

Statistics & ML: Regression, classification, clustering, time-series forecasting, causal inference, A/B testing, model optimization

RELEVANT EXPERIENCE

Amazon (AWS Marketing)

Seattle, WA

Business Intelligence Engineer Intern

June 2026 - Present

- Monitored \$400B+ in attributed pipeline by building an anomaly-detection model that separates business noise from genuine issues
- Designed model architecture using statistical thresholds and global/dimensional validations to adapt detection to business metrics
- Cut employee investigation time 5-10 hours per incident by automating scorecards and dashboards for stakeholder review

Michelin Connected Fleet

Los Angeles, CA

Project Manager (Contract)

December 2025 - March 2026

- Analyzed brake-score reliability in Python to cut braking events needed for a stable score, testing sensitivity and thresholds
- Built a Git-managed Streamlit prototype on AWS to visualize score convergence and flag maintenance events for stakeholders
- Developed an LLM-assisted alert-prioritization tool helping customer teams triage data collection failures by severity

Kohl's

Los Angeles, CA

Data Science Intern

October 2025 - February 2026

- Cut ETA error 70% by replacing a static 60-day carrier average with a two-stage XGBoost pipeline in Python and BigQuery
- Engineered 20+ high-signal features (lane definitions, rolling averages/variance) to model long-haul operational volatility
- Integrated 5+ enterprise data sources via BigQuery joins, building a unified, production-ready modeling dataset

Warner Music Group

Los Angeles, CA

Finance Intern | Data Science Lead

June 2025 - October 2025

- Delivered 25% improvement in Spotify forecasts by designing a two-year Python revenue model that strengthened deal planning
- Increased analyst efficiency 30% by developing AI-assisted Streamlit tools standardizing data extraction and revealing key drivers
- Optimized backend Snowflake pipelines, improving query performance 65%, reducing refresh time 5x, and cutting manual effort 80%

The Data Science Union

Los Angeles, CA

Director of Client Relations; member since September 2023

March 2025 - March 2026

- Led client discovery by identifying pain points, scoping projects with Fortune 500 partners, and translating technical concepts
- Drove \$10K+ in combined client contract growth and 3x qualified partner outreach by automating sourcing with Apollo
- Increased organizational efficiency 20% by founding a Client Relations Committee to delegate outreach and scale operations

RESEARCH & PROJECTS

Causal Inference Lab Student Researcher

June 2024 - January 2025

- Designed graded assessments for 500+ students by targeting where causal inference breaks down for first-time learners
- Evaluated and cleaned datasets for causal inference models to ensure data quality and reproducibility of research findings
- Implemented propensity score matching and DAG-based confounding analysis for causal inference research

Book Review Sentiment Analysis & Recommendation System

October 2023 - January 2024

- Processed 10,000 books and 6 million ratings to identify and predict user sentiment patterns
- Built a review-rating classifier with PyTorch and Sentence Transformers to rate book reviews
- Developed a Streamlit app that delivers personalized book recommendations, enabling users to explore unique preferences

COMPAS Machine Learning Research Project

October 2024 - January 2025

- Analyzed racial bias in the COMPAS recidivism algorithm, uncovering disparities in risk assessments
- Built and evaluated Random Forest and logistic models for risk classification; applied K-Means for profile segmentation
- Implemented de-biasing techniques: reweighing, threshold adjustment, and feature selection excluding race proxies
